

# Traka

Financial clarity for Nigerian  
traders and Small  
businesses

*Prepared for the Global Digital Economy  
Hackathon by Team Blueprint –University of  
Uyo*

# The Problem

Amaka can't see her own business operations.

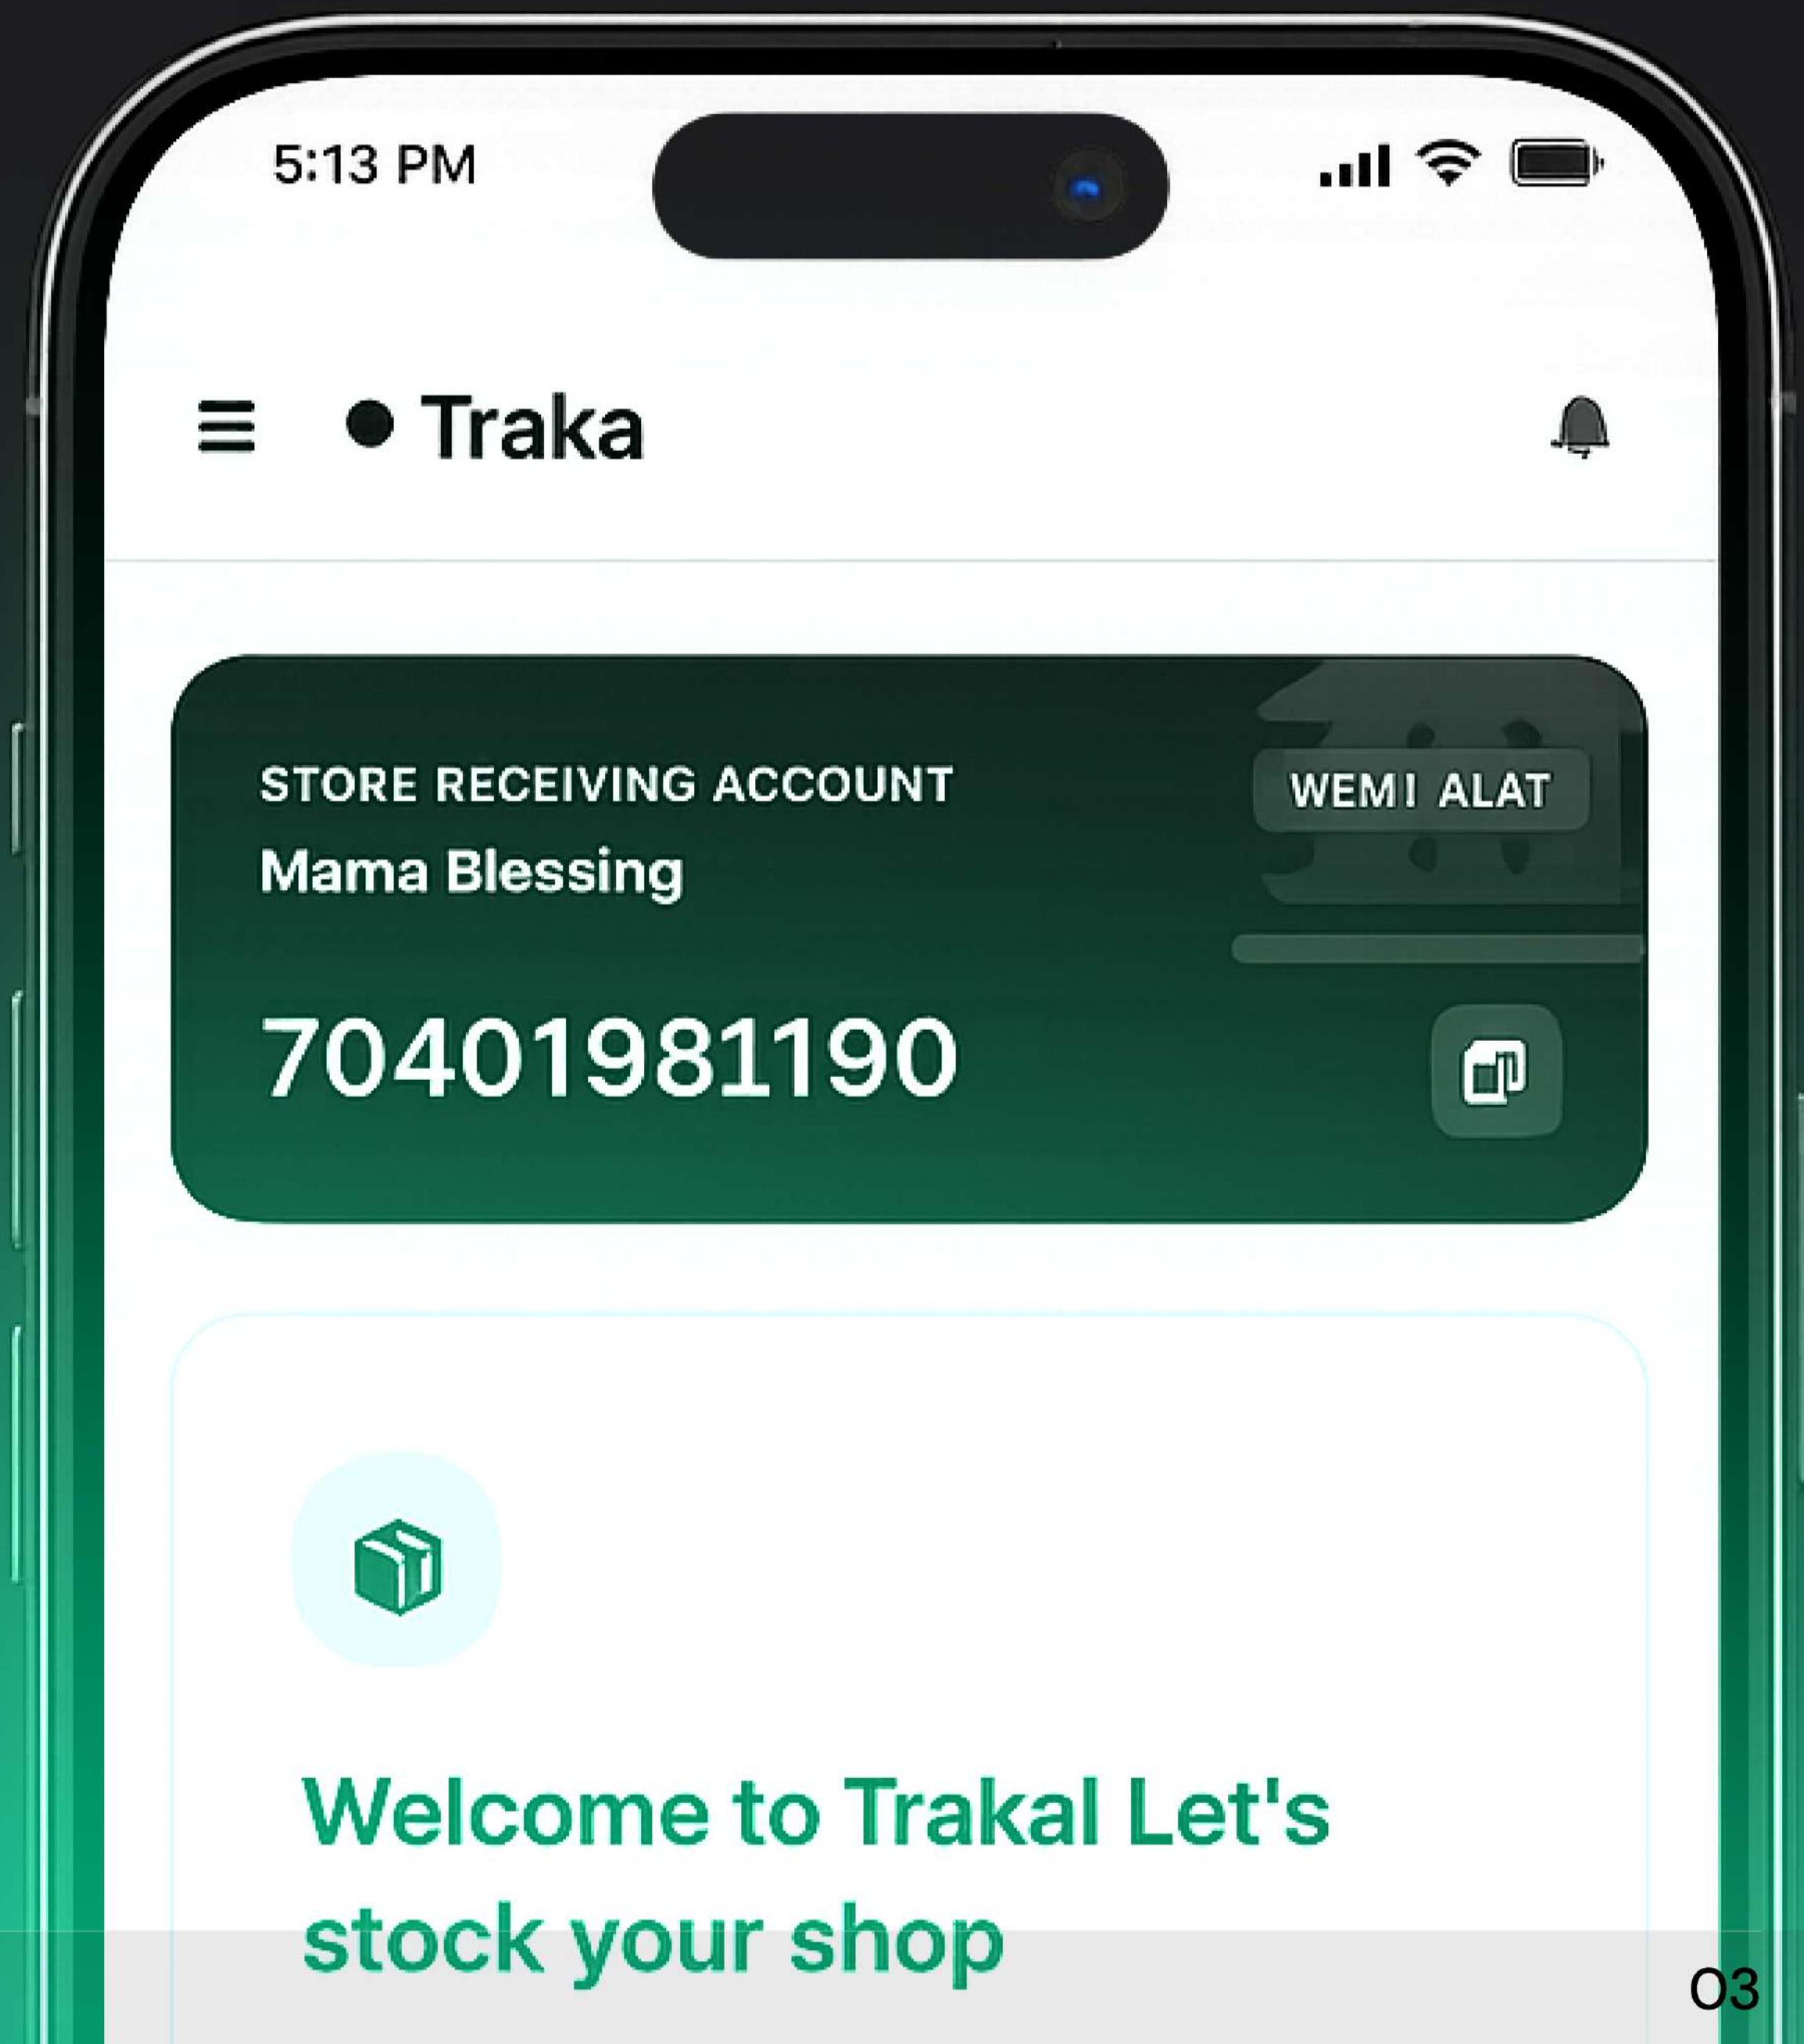

- She runs a provision store in a Lagos market. Today she sold bread, water, and rice as some are cash, some on credit. She doesn't know if she made a profit.
- She finds out she's out of stock only when a customer asks. Several customers owe her money, but she can't say exactly who, or how much.
- When she needs ₦50,000 to restock, no bank will lend to her because she has no record proving her business works and there are 39.6M MSMEs in Nigeria like Amaka.

# Our Solution

Traka turns how Amaka already runs her business into a financial record.

She sends a WhatsApp message ;  
"sold 2 bread, 1 milk" and Traka logs  
the sale, updates stock, and  
recalculates profit. No forms required.

# How it Works

Traka turns how Amaka already talks into a financial record.

- Dedicated virtual account at signup and Photo-Based Inventory System: Amaka snaps her Sales transfers update her books automatically.
- WhatsApp-parsed cash sales : Gemini turns her message into a structured record.
- Credit tracking: Debts logged by customer, repaid via auto-reconciling payment links.
- Voice insights : She asks "how much I don sell today" and gets a spoken answer, in her language (English, Pidgin, Yoruba, Hausa & Igbo.)

# Market Opportunity

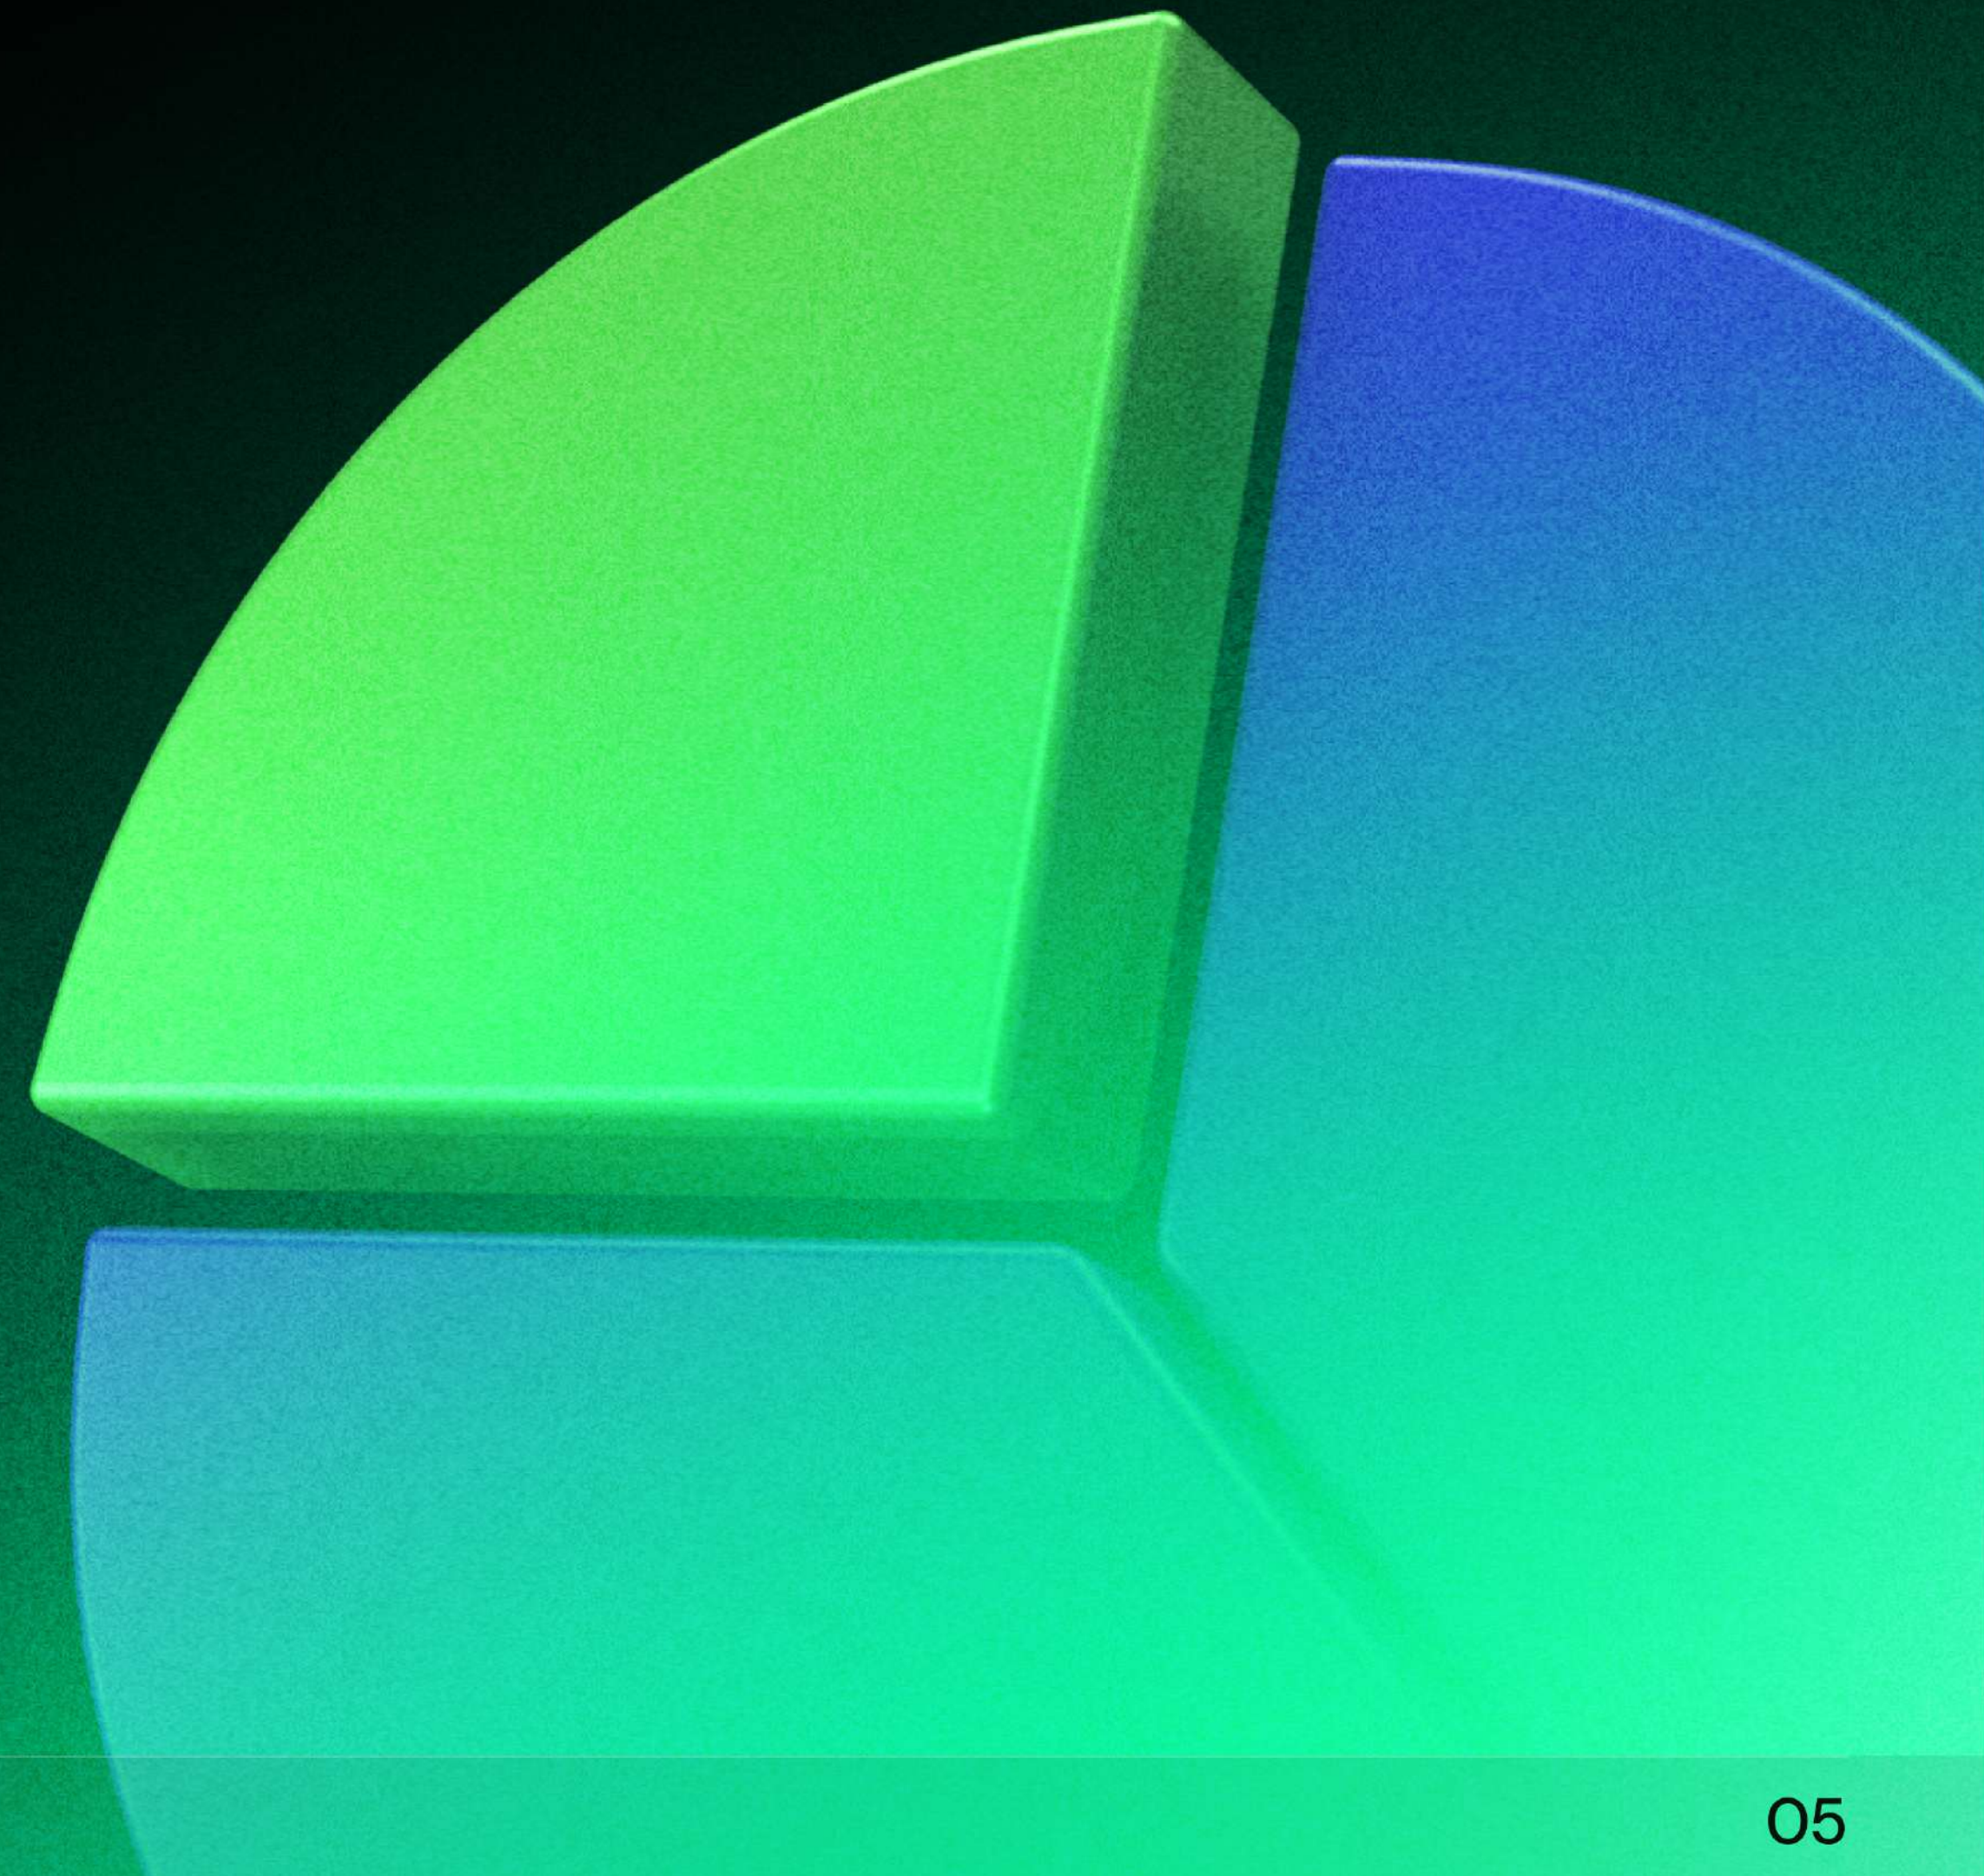

**39.6 million reasons this matters.**

Nigeria's micro and small enterprises generate 48% of GDP but remain financially invisible to lenders and to themselves.

Within this market, we're prioritizing:

- Women as they make up 41% of Nigeria's micro-enterprise owners.
- Youths under 30 which are 65% of new SME starters.

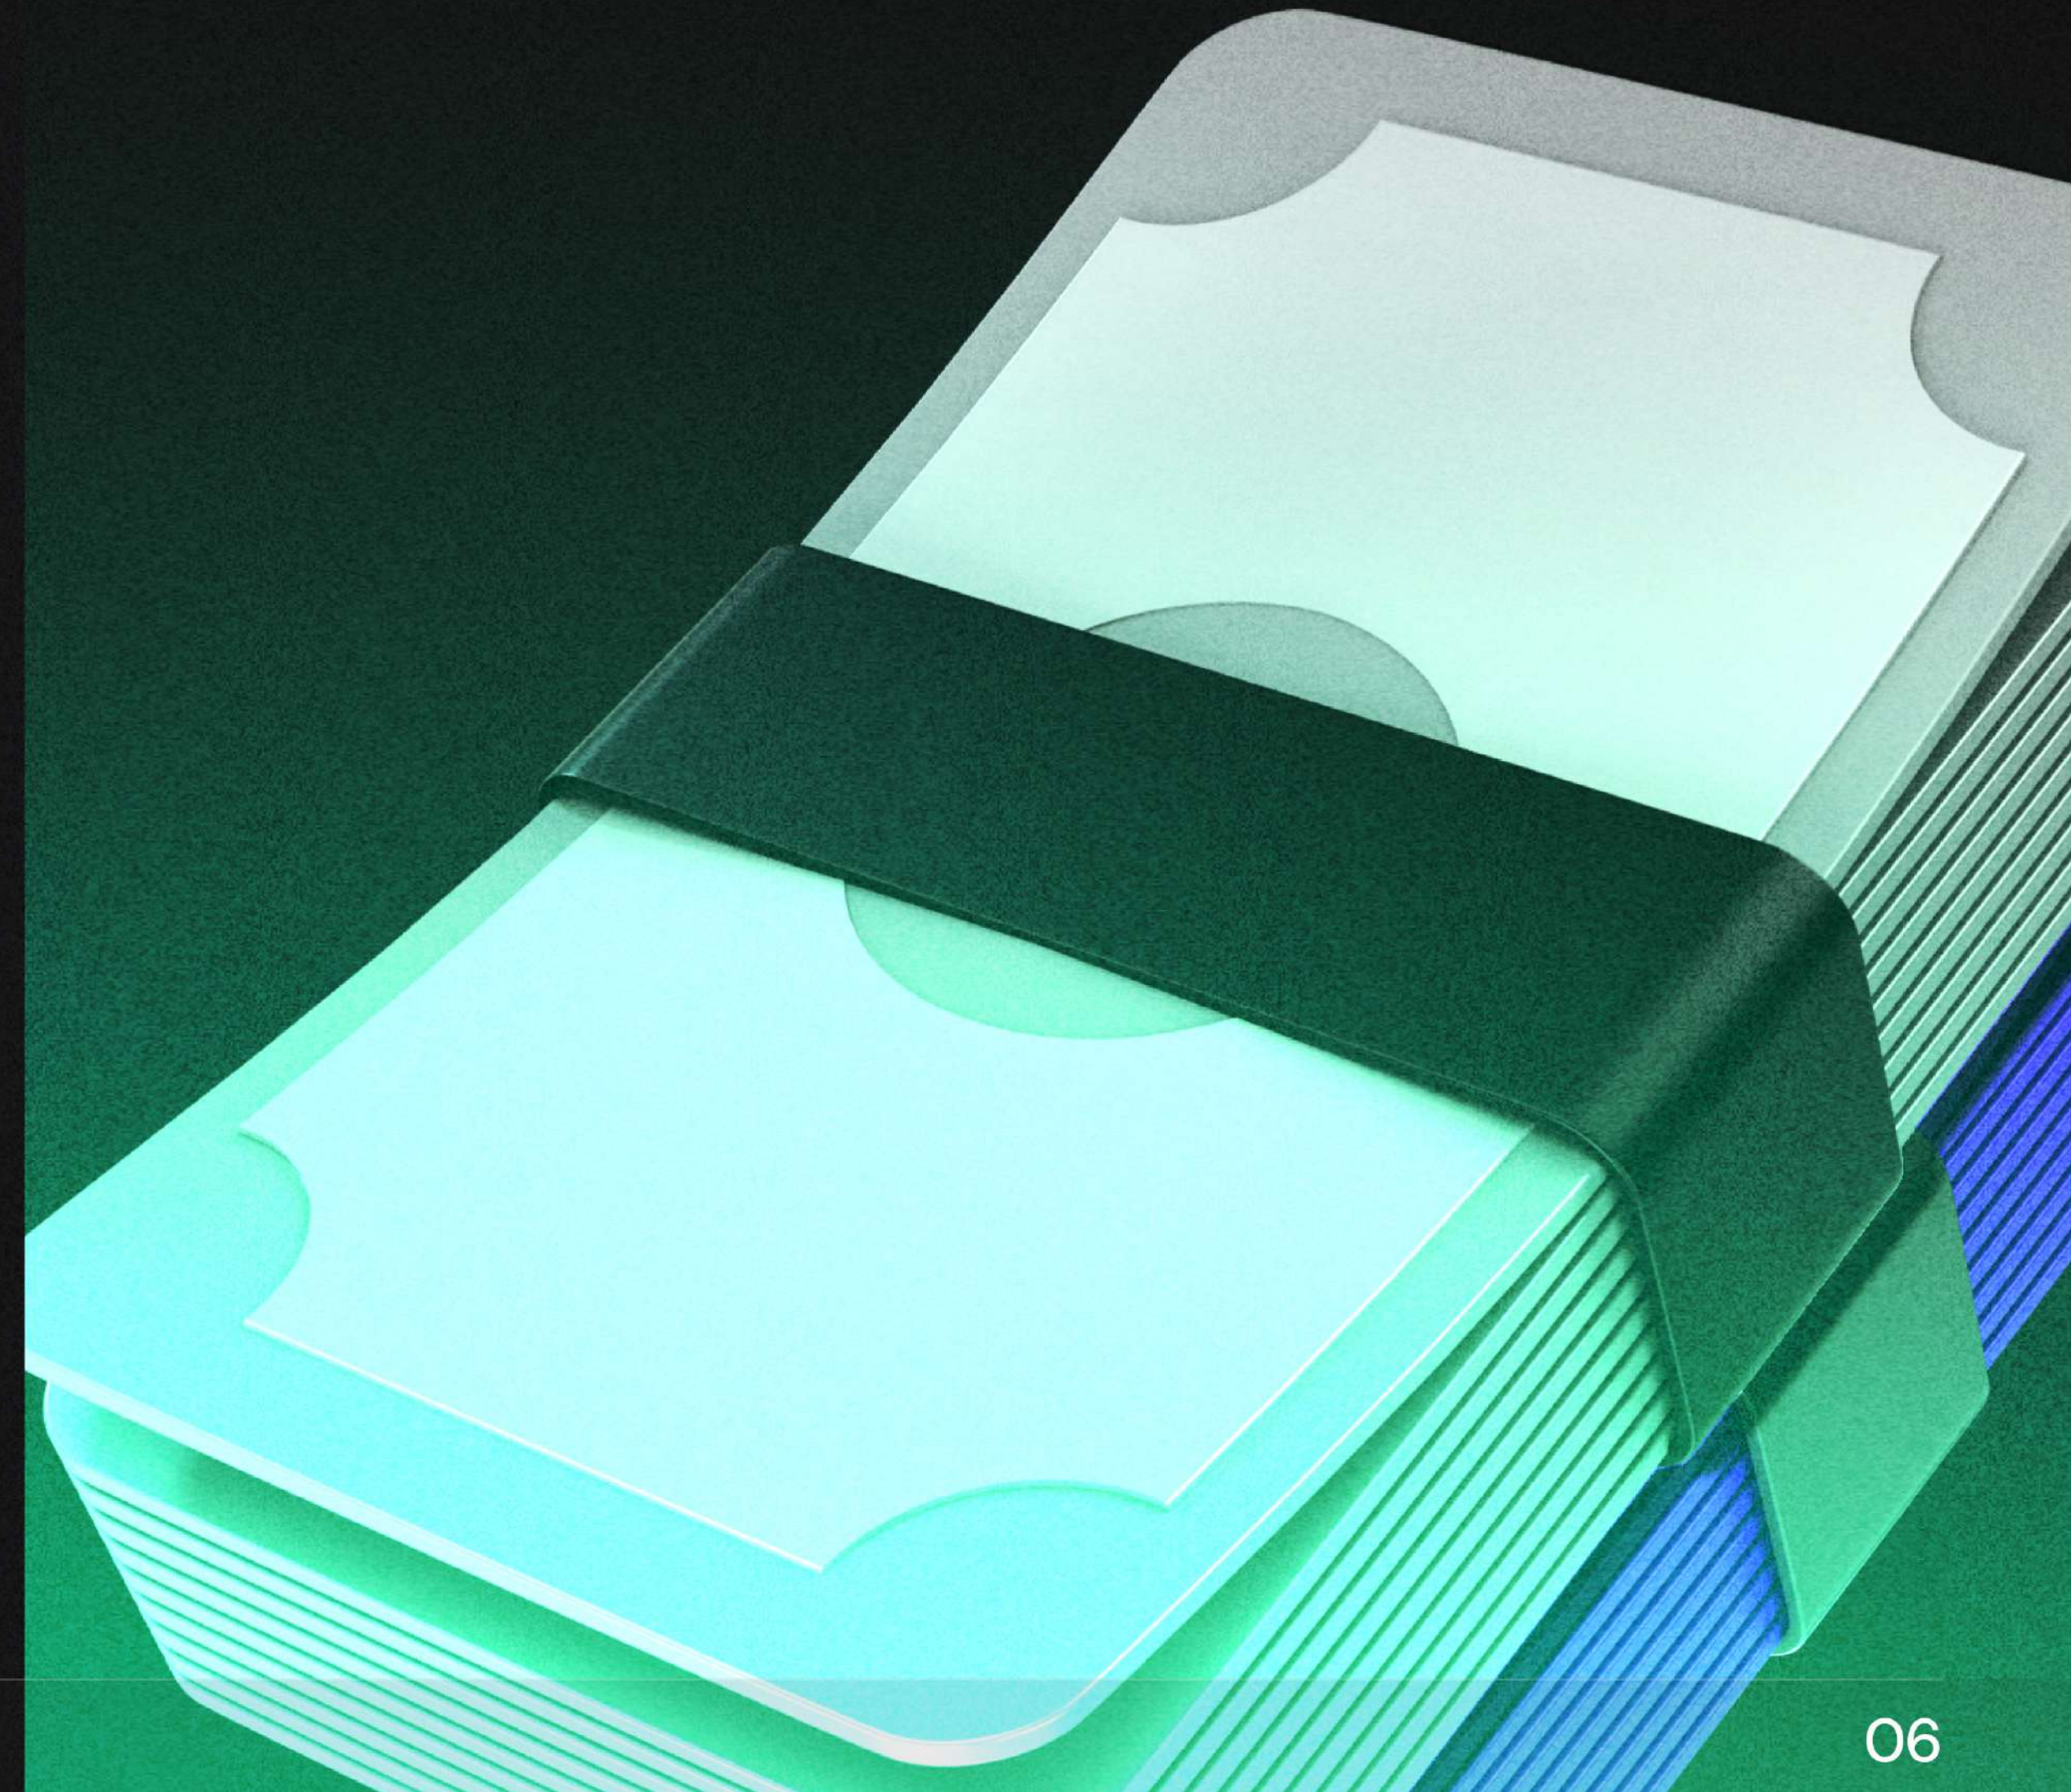

Existing tools like Kippa and Bumpa have proved the demand for digital bookkeeping but still require manual entry, which is why most traders remain on paper. The gap isn't desire. It's friction.

# Business Model

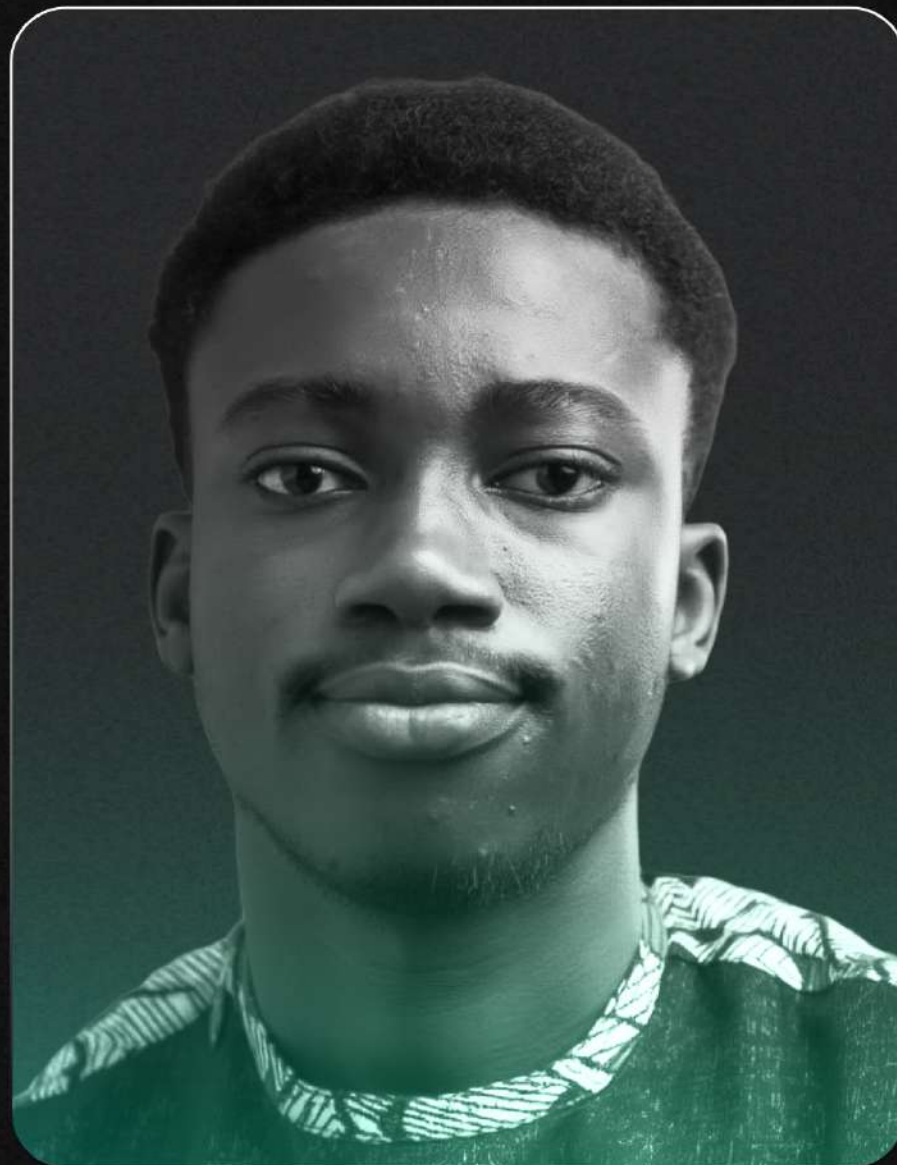

Free where it matters. Revenue where it's earned.

- Free at signup : No barrier for traders who have the least to spare.
- Transaction fee on payments processed through the virtual account.
- Subscription tier for merchants above a defined transaction volume.
- Embedded lending & insurance: A second revenue layer once a merchant's verified transaction history matures into a usable credit profile.

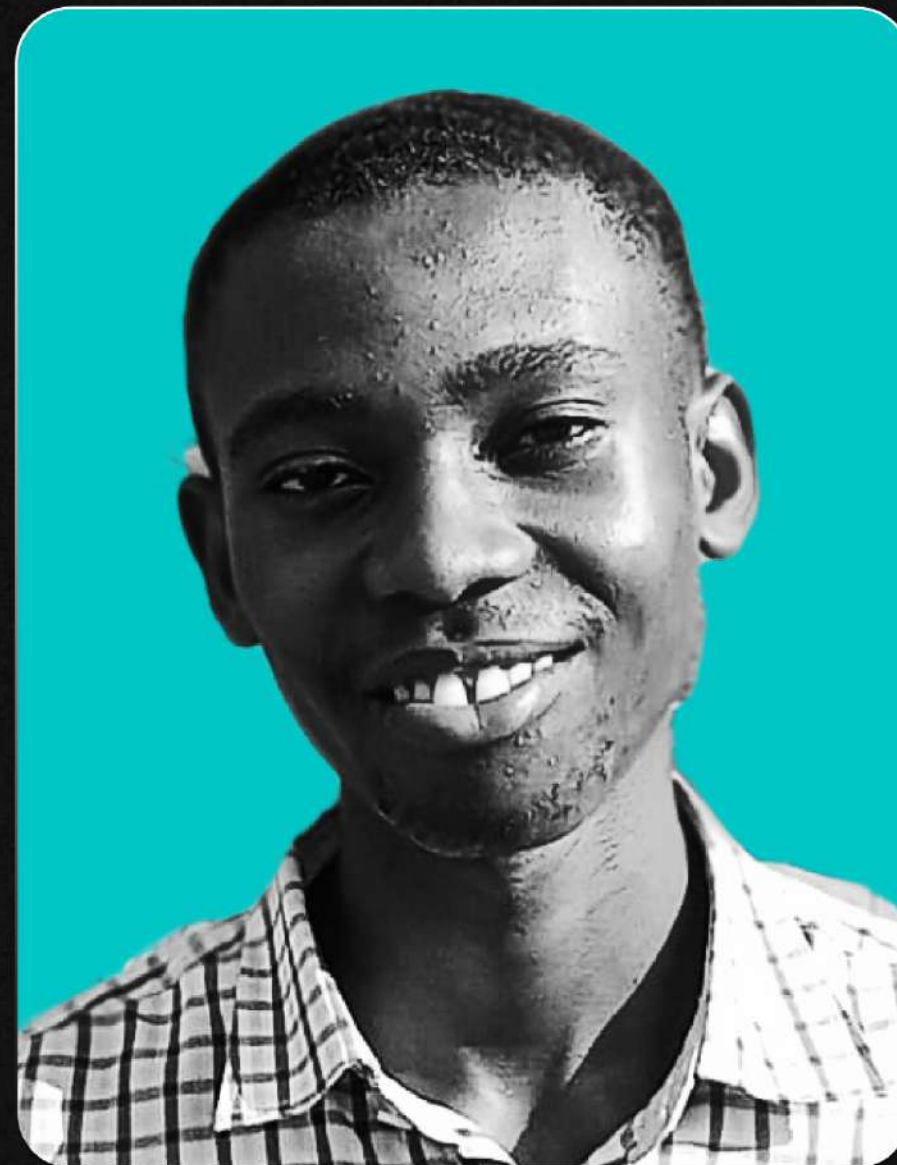

# The Team

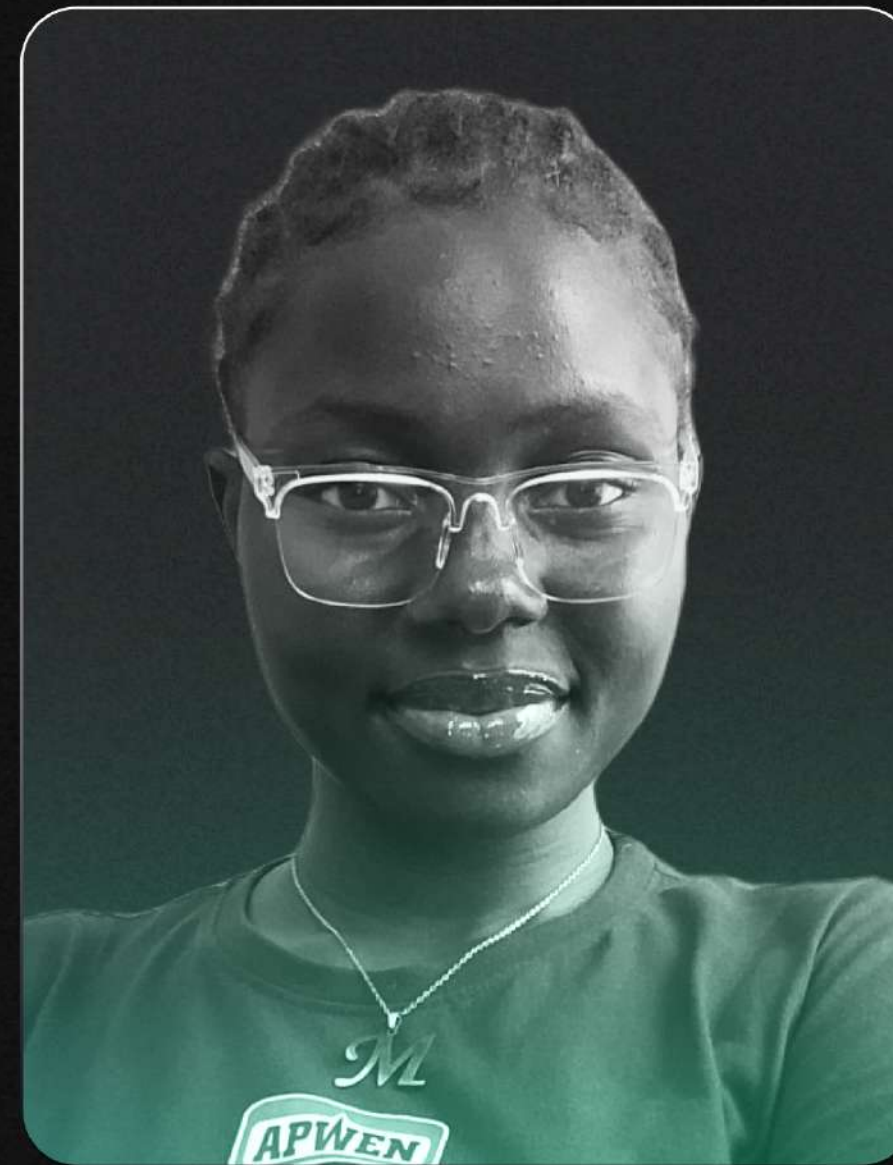

Built by University of Uyo students with hands-on experience in core product development knowledge, enough to build solutions for traders like Amaka, not around them.
